

Where I actually stand

My teacher's exact rules — dropped scores, best-of quizzes, final-replaces-midterm — encoded and run.

HW 6 · QUIZ 10 · MIDTERM 72 · FINAL 86 · AI TOOL: CLAUDE · VERIFIED BY HAND

87.05%

current grade, all rules applied

need 91

on the final to reach 90%

+3.5 pts

gained from final replacing midterm

THE BREAKDOWN — EACH PART'S SUBTOTAL

PART	WEIGHT	WHAT COUNTS	AVG	SUBTOTAL
Homework	20%	drop 45 & 60 → keep 85, 88, 90, 92	88.75	17.75
Quizzes	20%	best 8 of 10 (drop 0 & 70)	88.50	17.70
Midterm	25%	replaced by final (86 > 72)	86	21.50
Final	35%	final exam	86	30.10
Current grade				87.05%

✓ CHECKED BY HAND — HOMEWORK

Drop the two lowest (45, 60), leaving 85, 88, 90, 92.
Sum = 355 ÷ 4 = **88.75** × 0.20 = **17.75**.
Matches the script exactly.

🎯 TO REACH 90%

~90.9 → aim for 91

The final counts **twice** while it beats the midterm (25% + 35% slots), so each point moves the grade by 0.60. A 90 → 89.45% (short); a 91 → 90.05% (over).

I'm at **87.05%** right now. The biggest lever is the final: because it replaces the midterm while it's higher, effort there pays double — a **91** lands me at 90%.

Encoded my teacher's exact policy and ran it: homework drops two lowest, quizzes take best 8 of 10, and the final replaces the midterm when higher. Verified one category (homework) by hand against the script. Re-runnable with new scores through the term.
